INTERNATIONAL RESEARCH CONTRACTS

- April 2009 - 2011: Scientist, **Max Planck Institute** Research Group on Comparative Population Linguistics (MPRG CPL) MPI EVA, DoBeS project *Documentation of Dialectal and Cultural Diversity among Evens in Siberia*, Leipzig, Germany. This project is being conducted by Brigitte Pakendorf, Dejan Matic, Natalia Aralova and myself (MPI EVA) and realised in close

collaboration with Vassilij Robbek (**Institute for Human Sciences and for the Problems of Autochthonous People of the North** (IHSPAN), Russia, Yakutsk).

Comparative study of extensive reindeer herding and fishing among the Even (Kamchatka and Yakutia): Techniques of herding, landscape occupation and their terminologies. Analysis of discourses: logic sequences, symbolic representations and identity, economic and ritual values.

October 2008 - March 2009: Postdoctoral Research Fellow in the multidisciplinary research group Comparative Population Linguistics (CPL) MPI EVA; Personal research project "Social aspects of the population and language contact in North-eastern Siberia", **Max Planck Institute EVA**, (Leipzig, Germany, <http://www.eva.mpg.de/cpl>).

There is some molecular anthropological evidence for intermarriage amongst Siberian population groups. Linguistic investigations have found evidence for language contact through loanwords and structural borrowings. Could social anthropology identify past contacts between populations? The analysis of data among Even (clan names, geographical positions, demography, economies, languages, rules of marriage, kinship terminologies of regional groups) informs us about the contacts between regional groups and neighbouring peoples, conditions of economic life and cultural shifts. New developments should follow.

2007: Research Fellow at the "Scientific Research Center – Linguistic and Cultural Interactions", State University of Blagoveshchensk, Russia. Focus: Autochthonous knowledge in vernacular language among the Orochon Evenki of the Amur region. This center also connects researchers of different institutes of Siberia.

2002-2004: CNRS-MSH, Conception and realization of the prototype database NECEP (Non-European Components of European Patrimony, www.necep.net) in the framework of project ECHO 5° **PCRDT** dir. by Maurice Godelier) on the basis of Evenki culture.

FIELDWORK

Jan.-March & Jul.-Aug in 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020; Jan., Aug.-Sept 2021: Environmental changes; Covid-19 crisis; Climate change and pollution among the Evenki of Southern Yakutia and the Amur region, installation and monitoring with nomadic co-researcher S. Gabyshev and other herders of a transdisciplinary community-based observatory for climate and global changes, its impacts on nomads and adaptive practices. Natural and cultural heritage and tourism in southeastern Siberia (Projects: BRISK, BRISK'S OBS, BRISK'SOBS ENV, PARCS, POLARIS).

July 2014: China – Among the reindeer herding Evenki of Inner Mongolia, international research team (France, China, Russia) with Aurore Dumont.

July-August 2012: Evenki of Southern Yakutia and the Amur region, study of climate change perception, consequences and adaptation practices in towns and villages.

June-October 2010: Even of Kamchatka and the Nanay and Evenki of Khabarovsk and the Amur region, study of the market economy and tourism among the indigenous peoples.

October 2009: Evenki (Amur region and Southern Yakutia), Even/Evenki comparison, study of shifts in economic and social values.

May – September 2009: Even, reindeer herders of Northern Yakutia's tundra: documentation and comparison of relationship with the natural environment (MPI, in collaboration with D. Matic).

Between 1994 and 2008: 8 years of ethnological missions between 1994 and 2008 among several Evenki, Even and Yakut groups of Yakutia and the Amur region, with 2 years in a sedentary surrounding (villages and towns) and 6 years among nomadic peoples (reindeer herders with small herds). Aside from data on ritual life, some of the results of which have been described before, I studied several rituals with shamans among the Evenki and the Yakut. I collected a significant amount of data on every aspect of these societies: social organization, the economy, technical knowledge, symbolic representations of wild and domestic animals, plants, space,

identities and pan-identity, the social and ritual uses of languages and dialects, linguistic innovations, and so on.
